Creative DevOps / SysAdmin

Cologne

We are looking for a creative Sys Admin / DevOps for extending and maintaining our internal IT as well as our external installations and servers.

We don't need a certified Windows Sys Admin, but a fresh, creative individual, who loves to work in a creative environment and thinks solution-oriented. We are in a very mixed OS environment Mac, Windows, *nix and have many different use-cases – from multi screen installations, to Apache-server hosting, to nodejs based apps – docker deployments.

Your work will include, but is not limited to:

- Planning and configuration of IT-systems (Windows, Mac, *nix)
- Configure and customize hard- and software, depending on users needs
- Solving of errors and issues on installations in our infrastructure and monitoring backuping
- Installing web based servers (Apache, Nginx, Node) as well as local offline installations
- Deployment of VM and/or docker based machines
- Many other fun things ;)

Please send your application not via snail mail, but via mail to jobs@demodern.de
